CC ADC3089) and the polypeptides they encode (ADC30890-ADC3080). The clivention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression convectors and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting polynucleotides or polypeptides of the invention; and methods of compound which binds to a polypeptide of the invention. The cinvention further discloses methods of peventing, treating or ameliorating a medical condition; kits compounds that modulate the cinvention; methods for the identification of compounds that modulate the contract sequences corresponding to the cDNA sequences of the invention are conting sequences corresponding to the cDNA sequences of the invention are identification of mucleic acids and polypeptides of the invention are constituted acids and polypeptides of the invention are constituted for treating biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are caused for treating diseases such as Parkinson's disease, Alzheimer's cdisease and other neurodegenerative diseases, anaemia, platelet consers, and in the recombinant production of a protent. The polypeptides or cancer. The nucleic acids may also be used as hybridisation probes or concers, and in the recombinant production of a protent. The polypeptides care also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically collaboration and electronic format directly from WIPO at the sequence data for this patent did not form part of the printed specification, but was considered to the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide concludes in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon mucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (PENN/) PENN S G.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (each

New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, sclerosis, atherosclerosis, cancer, infections, osteoporosis or Zhong WPI; 2002-713508/77. P-PSDB; ABG97497. Σ, multiple

Claim 22; Page 139; 266pp; English.

Parkinson's disease.

The present invention relates to a new polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX nucleic acids, or diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau syndrome, Alzheimer's disease, stroke, tuberous sclerosis, erebral pylopercalcaemia, Parkinson's disease, Huntington's disease, cerebral pylopercalcaemia, Parkinson's disease, Huntington's disease, cerebral pylopercalcaemia, Parkinson's disease, multiple sclerosis, ataxia-telangicctasia, leukodystrophies, addiction, anxiety, depression, pain, obesity, crohn's disease, osteoporosis, inflammatory bowel disease, infertility, inflammatory bowel disease, atherosclerosis, hypertension, scleroderma, haemophilia, diabetes, panoreatitis, autoimmune disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versus-host disease. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, wound healing and parasitic

                                                                                                                                                                     뭐
                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated human secreted protein (SECP)

CD polypeptide from 63 fully defined protein sequences given in the

CD polypeptide from 63 fully defined protein sequences given in the

CD specification. The polypeptide is useful for the diagnosing/treating of a

CD disease with decreased/overexpression of SECP. Examples of disorders

CD associated with abnormal expression of SECP include a cell proliferative

CD disorder e.g. arteriosclerosis, cancers; autoimmune/inflammatory

CD disorder, AIDS, allergies, anaemia, asthma; cardiovascular disease e.g.

CD congestive heart failure, ischaemic heart disease; developmental disorder

CD congestive heart failure, ischaemic heart disease; developmental disorder

CD congestive heart failure, ischaemic heart disease; gellepsy or stroke.

CD Alzheimer's disease, dementia, Parkinson's disease, epilepsy or stroke.

CD CD creating knockin humanised and polypeptide are further useful for analysing

CD creating knockin humanised animals (pigs) or transgenic animals (mice or

CD creating knockin human disease, and for somatic or germline gene therapy,

CD conditions of the invention

CD creating dementing phybridisation probes useful in mapping the

CD creating cocurring genomic sequence. This polymucleotide sequence

CD creating the bulk of a human secreted protein of the invention

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID No:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; or (c) a sequence
                                                                                                                                                                                                                                                             New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer
                                                                                                                                                                                                                            Claim 1; SEQ ID NO 2473; 5504pp; English.

                                              CC comprising the above polypeptide fused to a heterologous polypeptide; (6) cc an isolated antibody that binds to the above polypeptide; (7) a process cc for producing the antibody; (8) an isolated oligopeptide; (7) a process cc for producing the antibody; (8) an isolated oligopeptide that binds to the above polypeptide; (10) a cc composition of matter comprising the above (chimeric) polypeptide, (10) a cc composition of matter comprising the above polypeptide, in combination composition of matter comprising the above (chimeric) polypeptide, (10) a composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of cinhibiting the growth of a cell that expresses the above protein, where cc the growth of the cell is at least in part dependent upon a growth cc inhibiting effect of the above protein; (13) a method of cells that express the above protein; (13) a method of determining the protein in a sample suspected of containing the protein cells that express the above protein; (14) a method of described above; (15) methods of diagnosing the presence of a protein in a sample suspected of containing the protein companic malecule to a cell that expresses the above protein; (13) a method of containing the protein corganic melecule to a cell that expresses the protein described above. Cc protein, and (17) a method of binding an antibody, oligopeptide or corganic melecule to a cell that expresses the protein described above. Cc the TAT sequences have cytostatic activities, and can be used in gene cc therapy. The composition and methods are useful for diagnosing, cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative dis

                  CC sequences (see SEQ IN NO:1 to 46221; (b) the full-length coding region of CC (a); (c) the complement of (a) or (b) (d) a sequence that has 80% CC (c). Also described: (1) an expression vector comprising the above mucleic acid; (2) a host cell comprising the above expression vector; (3) CC a process for producing a polypeptide; (4) an isolated polypeptide CC comprising; (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-CC length coding region of the above nucleotide sequences; (c) a sequence cC chaving at least 80% identical to (a) or (b); (5) a chimeric polypeptide; (6) CC an isolated antibody that binds to the above polypeptide; (6) an isolated antibody that binds to the above polypeptide; (6) an isolated oligopeptide that binds to the above polypeptide; (6) antibody, oligopeptide; (9) a tumour-associated antigenic target (7MT) CC binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide; (6) antibody, oligopeptide or TAT binding organic molecule, in combination CC with a carrier; (11) an article of manufacture comprising a container and CC inhibiting the growth of a cell that expresses the above protein, where CC inhibiting the growth of a cell that expresses the above protein, where CC inhibiting the protein in a sample suspected of containing the protein of cells that expresses the above protein of cells that expresses the above protein and cell proliferative container; (12) a method of containing the protein and container and cell that expresses the above protein and containing the protein and container and cell that expresses the protein determining the composition and cell that expresses the protein determining the protein and container and cell that expresses the protein determining the composition and methods of disorder associated with increased expresses the protein described above. The composition and cell be a cell that expresses the protein descr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.

The present invention describes an isolated tumour-associated antigenic (arrayet (TAT) nucleic acid comprising: (a) any of 4622 nuclectide (CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequences (see SEQ IN NO: to 4622; (b) the full-length coding region of (CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(CC (c) Also described; (l) an expression vector comprising the above mucleic acid; (2) a host cell comprising the above expression vector; (3) (CC a process for producing a polypeptide; (4) an isolated polypeptide (CC comprising: (a) an amino acid sequence encoded by any of the above comprising the above polypeptide; (b) an amino acid sequence encoded by the full-(CC length coding region of the above nucleotide sequences; or (c) a sequence (CC comprising the above polypeptide; (f) an isolated antibody; (a) an isolated oligopeptide; (f) a process (c) an isolated antibody; (a) an isolated altipenic target (TAT) (CC binding organic molecule that binds to the above polypeptide; (l) a process (c) a sequence (c) antibody; (l) an article of manufacture comprising a container and the composition of matter comprising the above (chimeric) polypeptide; (l) a composition of matter comprising the above (chimeric) polypeptide; (l) an isolated altipenic target (TAT) (CC binding organic molecule; in combination (c) inhibiting the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth (c) the growth of the above protein; (l1) a method of determining the protein in a sample suspected of containing the protein (c) presence of a protein in a sample suspected of containing the protein (c) and colored above (c) a method of determining the protein (c) and colored above (c) and colored a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versus-host disease. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haemopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probles, in chromosome manning times.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a new polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful in the manufacture of medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX nucleic acids, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau syndrome, Alzheimer's disease, stroke, tuberous sclerosis, hypercalcaemia, parkinson's disease, Huntington's disease, cerebral palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxiatelangiectasia, leukodystrophies, addiction, anxiety, depression, pain, obesity, Crohn's disease, osteoporosis, inflammatory bowel disease, inferrility, inflammatory bowel disease, atherosclerosis, hypertension, scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease, asterial and the content of the conte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 22; Page 139;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, sclerosis, atherosclerosis, cancer, infections, osteoporosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pharmacogenomics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; secreted protein; gene; ss; nutritional supplement; haemophilia; viral infection, bacterial infection; fungal infection; diabetes; asthm autoimmune disorder; rheumatoid arthritis; multiple sclerosis; tumour; autoimmune thyroiditis; allergic reaction; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; liver fibrosis; cancer; ulcer coagulation disorder; inflammatory disorder; Crohn's disease; incision; tissue regeneration; wound healing; burn; haematopoiesis; myeloid cell deficiency; lymphoid cell deficiency.
            The invention relates to 592 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal and disorders such as viral infections, bacterial infections, fungal
                                                                                                                                                                                   Five hundred and ninety two polynucleotides derived from human tissue sources which encode secreted proteins, use: immune deficiencies and disorders such as autoimmune disorders.

They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis and for treating myeloid or lymphoid cell deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerrative diseases (e.g. Alzheimer's disease, parkinson's disease, liver fibrosis, coagulation disorders (e.g. haemophilia),

                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                      The invention relates to human secreted polypeptides designated LP095, LP219, LP217, LP220, LP221, LP222, LP229, LP237 or LP338 and nucleic acid molecules encoding such polypeptides. Novel secreted proteins of the invention are used for treating diseases such as atherosclerosis, attractionare disease, diabetic retinopathy, psoriasis, pancreatitis, attraction industrial attraction are used immunodeficiency, ischaemia, carcinomas, haemolytic anaemia, combined immunodeficiency, ischaemia, carcinomas, haemolytic anaemia, reperfusion injury, neoplasms and cancer especially liver cancer. They are also used for wound healing. Polymucleotides of the invention can be used to generate transgenic animals or knock out animals, which in turn, are useful in the development and screening of therapeutically useful reagents for use in the treatment of diseases associated with LP polypeptide associated activity. They are also used in gene therapy. The present sequence is human LP237 secreted protein encoding cDNA
                                                                                                                                                                                                                                                                                        Query Match

  The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The
protein or complementary secidentifying expressed genes
                                                                                                                                                                                              New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/c treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated arginine-rich protein-like polynucleotides and pouseful for diagnosing and/or treating conditions associated wiscrivity of the arginine-rich polypeptides, such as cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

CC Sequences AAF59590-AAF59643 represent cDNAs encoding 54 human cell cycle CC and proliferation proteins (CCYPR), AAB60453-AAB60506. CCYPR and agonists CC of CCYPR are used to treat diseases or conditions associated with cc decreased expression of functional CCYPR, while CCYPR antagonists are CC used to treat diseases or conditions associated with overexpression of functional CCYPR, while CCYPR antagonists are CC used in enzyme-linked immunosorbent associated with overexpression of CC detect CCYPR. Monoclonal or polyclonal antibodies to CCYPR may be CC detect CCYPR. CCYPR itself may be used to detect compounds e.g., CC antibodies, oligonucleotides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that CC modulate the activity of CCYPR. CCYPR nucleotides can be used in gene cc transgenic animal models of human disease, and can be used in gene CC therapy in target cells with genetic abnormalities with respect to the expression of CCYPR, Diseases which can be diagnosed, treated and CC associated with CCYPR. Diseases which can be diagnosed, treated and cc onclude immune, developmental and cell agonists or antagonists or include anaemia, epilepsy, arteriosclerosis, asthma, cancer, includes include anaemia, epilepsy, arteriosclerosis, asthma, cancer, include anaemia, epilepsy, arteriosclerosis, asthma, cancer, include anaemia, epilepsy, arteriosclerosis, asthma, cancer, include anaemia, disorders of the menstrual cycle and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           맑

CC sequences (optionally with conservative amino acid substitutions), an CC isolated antibody that binds specifically to a peptide cited above, CC methods of selling and/or licensing single exon probes or microarrays to CC a customer desiring to measure gene expression, a method of providing CC human gene expression data by subscription, and a computer-readable CC storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe CC cited above. The probe, methods and apparatus are useful in gene CC expression analysis. The probes may be used as tools for surveying CC tisques to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. CC In addition, the probes are used in identifying and characterising CC alternative splicing events, in detecting and characterising gross calternative splicing events, in detecting and characterising gross calternative splicing events, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human CC single exon probe of the invention. Note: The sequence data for this contain the CC format directly from USPO at the contain of the present sequence data for this contain the CC format directly from USPO at the contain the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a nucleic acid probe for measuring human gene CC expression, comprising any of the 27,400 fully defined nucleotide CC expression, comprising any of the 27,400 fully defined nucleotide CC encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that CC hybridises under high stringency conditions to a nucleic acid molecule CC expressed in human cells or tissues. Also included are a spatially-CC addressable set of single exon nucleic acid probes for measuring human CC gene expression (comprising a plurality of single exon nucleic acid CC probes cited above, where each of the plurality of probes is separately CC and addressably isolatable or amplifiable from the plurality), a single CC exon microarray for measuring human gene expression, a wector comprising the single exon CC probe cited above, an ORF-encoded peptide comprising the single exon CC contiguous amino acids of any of the above-mentioned amino acid and contributions of the above-mentioned amino acid of the above-mentioned amino acid and contributions are a spite interior.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 15; SEQ ID NO 9211; 80pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diameter forces in contracts.
Drosophila melanogaster expressed polynucleotide SEQ ID NO 16031.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 340 BP;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                The invention relates to an isolated polynucleotide comprising any one of CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was CC determined by the technique of SBH (sequencing by hybridisation). Also CC included is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleotide. The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (EST) for CC identifying expressed genes or for physical mapping of the human genome, CC responsible for genetic disorders and other traits. The nucleotide Sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antisoned DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data CC obtained in electronic format directly from USBTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                        The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the fill 5' UTR is rarely included. 'ESTs are derived from mRNAs with intact 5' ends and can therefore be us to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene

                                                                                                                                                                                                                                  expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic seguences from the present invention. AAK942 to AAK54990 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                             AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABL07182 standard; cDNA; 4406

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAQ00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.

Ishii
nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combin of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602
                                                                                                                                                                                                                                                                                               Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-MAY-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-JUL-1999;

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods AH803166 to AH13628 and AH813633 to AH189742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the

                                                                                                                                                                                                     SEQ ID
                                                                                                                                                                                                    NO 18986; 2537pp + Sequence Listing;
                                                                                                                                                                                     sets
                                                                                                                                                                                                     English
```

sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence's eat least 15 nucleotides and the combination of the 5'-end sequence's eat least 16 nucleotides and the combination of gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human aclid sequences; AAB2946 to AAB95893 represent human anino acid sequences; and AAH13627 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end present invention for synthesising 5602 full-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABM27253 to ABM59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      biological or pathological state, and so allowing the detection of tissue - and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of genome, useful for detecting tissue-, pathology-, and developmental-

A protein encoded by a gene of the invention has analgesic activity. A polynucleotide of the invention may have a use in gene therapy. The gene sequence is useful for preparing a composition for diagnosing or treating pain. The present sequence represents a gene of

                                                                                                                            S
                                                                                                                                                                                                                                                                     comeasuring human gene expression, a vector comprising the single exon contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an ci isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing thuman gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe controlled above. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising calternative splicing events, in detecting and characterising gross alternations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained conclusionated in electronic format directly from USPTO at sequence.
                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                   CC Candida spp. sequences that are differentially expressed in a pathway continuing and continuing and continuing and continuing are differentially expressed in a pathway continuing the pathway or continuing the pathway of the continuing and compositions, continuing a medicament for treating, preventing and/or alleviating continuing a medicament for treating, preventing and/or alleviating continuing a medicament for treating, preventing and/or alleviating continuing a medicament for treating and or proliferative disorders, such as cancer, or for preventing apoptosis in certain diseases. The compounds cor polypeptides, or the genetically modified organism are useful for preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease, this sequence represents a polynucleotide associated with the Bax gene continuing against the bax gene continuing against presents and continuing against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vasotropic; vaccine; gene therapy; proliferative disorder; cancer;
